## Explanation

### General Documentation suggestions

- <https://thepracticalsysadmin.com/how-to-do-internal-documentation/>

### Useful Plugins

#### Switches

- <https://www.dokuwiki.org/plugin:switchpanel>

- <https://www.dokuwiki.org/plugin:edittable>

## Tables

- <https://www.dokuwiki.org/plugin:tablewidth>

## ToDo List

- <https://www.dokuwiki.org/plugin:todo> (old)
- <https://www.dokuwiki.org/plugin:task> (new/modern)
- <https://www.dokuwiki.org/plugin:do> (requires <https://www.dokuwiki.org/plugin:sqlite>)

## Templates

Über die Weboberfläche editierbare Templates.

- <https://www.dokuwiki.org/plugin:templatepagename>

## Examples

Some examples can be found, a example template in In-House and one example for software under Open Source.

```
-Applications
--In-House
---Template
--Open Source
---Keepass
--Policies
```

## Templates

A *"template.txt"* is for current the namespace/category its in and a *"%\_%"\_template.txt"%%* is for the current namespace/category and every other one below. If a new Site is created the following template is used:

```
==== @!PAGE@ ====
Description of this namespace. \\
<nspages -h1 -subns -exclude -textNS="Subcategories:" -textPages="Pages in
this subcategory:" -hideNoPages -hideNoSubns>
```

## Lists

List as used above ("Subcategory:" and "Pages in this subcategory:") while hiding if one of this two

points is empty.

```
<nspages -h1 -subns -exclude -textNS="Subcategories:" -textPages="Pages in  
this subcategory:" -hideNoPages -hideNoSubns>
```
